

MPC2000XL V1.14 Operating System Upgrade

This is to announce the release of V1.14 operating system for the MPC2000XL. The main purpose of this update is to correct some minor bugs in the operating system.

[Corrections]

1. Zip disk data corruption - **fixed**

On MPC2000XL's with an ATAPI Zip disk installed internally, the data on the Zip disk may be occasionally damaged. This may happen when the drive is in sleep mode and does not correctly wake up when a disk operation (save or load), or a disk write operation (save, rename, overwrite, erase, etc.) is performed.

The wait time for the restart of the Zip disk in V1.12 OS is set to 3 sec. However the Zip disk may not restart within this time period, causing a timeout. In this case the next write operation may damage the contents of the disk. In V1.14, the wait time has been extended from 3 sec to 20 sec.

2. Song conversion problem - **fixed**

A Song may not be properly converted to a sequence if one of the sequences in the song has a large number of events (over 768 notes) and is repeated more than twice in the song.

3. Song conversion problem - **fixed**

A song may not be properly converted to a sequence if the sequence contains MIDI system exclusive messages and the track containing those messages is set to OFF, and the option of "OFF TRACKS IGNORED" or "MERGED ON MIDI CH" is selected in the song convert options.

4. MTC Slave problem - **fixed**

In MTC slave mode a song may play at an unstable tempo at the point where a sequence changes to the next sequence if the song contains several sequences with different tempos.

5. Edit range problem - **fixed**

In EDIT mode, the time range cannot be set correctly after pressing TC (F1) in STEP EDIT mode.

Note: No addendum to the Operator's Manual has been issued since this is only a maintenance version that does not affect the actual operation.

*For information on how to obtain the upgrade, check the Akai web site at
